COURSE SYLLABUS

TEXTS:

Raven, Peter H., Ray F. Evert, and Susan E. Eichhorn. 2005. <u>Biology of Plants</u>. Seventh Edition. W. H. Freeman & Co. ISBN: 0-7167-1007-2

Evert, Ray F., Susan E. Eichhorn, and Joy B. Perry. 2005. <u>Laboratory Topics in Botany</u>. Seventh Edition. W.H. Freeman & Co. ISBN: 0-7167-6205-6

Plotkin, Mark J. 1993. <u>Tales of a Shaman's Apprentice</u>. Penguin Books.

ISBN: 0 1401.2991

OPTIONAL:

Leopold, Aldo. 1949. <u>A Sand County Almanac</u>. Balantine Books. This book is optional. You may purchase it in the bookstore for about \$6.00, or copies will be on reserve in Reeves Library.

COURSE OBJECTIVES:

Biology 119 is an introductory course in plant science designed to introduce you to plants as living organisms. One of the principal goals is to examine the importance of plants in our every day lives. Not only do plants provide us with food and fiber, but also a broad array of important medicines, pharmaceuticals and pain killing drugs. Recent research has shown that certain plants produce potent anticancer drugs, and it is likely that drugs from tropical plants will be useful in treating AIDS. Ironically, the ecosystems which contain these plants are at risk and many of them may not survive the next two decades. Early in the course we will discuss the rapid loss of biodiversity and its potential effects on our lives.

Another goal of the course is to examine the historical and cultural significance of plants, particularly the pivotal role of plant domestication in the rise of civilization.

A third goal will be for us to see how plants have been used as experimental organisms to solve important biological problems. We will explore the relationships between structure and function in higher plants, especially photosynthesis, and see how plants respond to changes in their environment. We will also discuss some of the exciting new advances in plant biotechnology to see how genetic manipulation of important species is accomplished.

Finally, we will examine a few representative examples of major plant groups and see how they reproduce themselves. Based on differences in reproductive patterns we will discuss some of the major trends in plant evolution.

ATTENDANCE:

Plan to attend all regular classes, laboratories, and exams. Missing an exam means that the exam will be given a score of zero and averaged with other test grades for the semester. In the case where an exam is missed for a valid reason, the exam will not count against the final average and the remaining test scores will be averaged.

GRADING:

Grades are based on lecture exams, laboratory quizzes, a laboratory practical exam, and a final exam. Examinations serve two roles: they are learning experiences and measurements of achievement.

	Point <u>Value</u>	Percentage of <u>Final Grade</u>
Three (3) hour exams (100 points each)	300	33.3%
Four (4) laboratory quizzes (50 points each)	200	22.2%
One (1) laboratory practical exam	150	16.7%
Final exam (comprehensive)	<u>250</u>	<u>27.8%</u>
- -	900	100.0%

ACADEMIC HONESTY:

The instructor adheres to the policy statement on academic integrity outlined in the current Student Handbook.

EXTRA CREDIT:

For those who wish to do so there are extra credit videos which may be viewed in the Reeves Library. Each is worth 10 points. If you elect to do this, you must advise the instructor in advance and then go to Reeves Library to view the film. To receive credit you will need to sign a sheet in the Library and turn in a one page abstract to the instructor summarizing the central ideas in the film. Your summary should be turned in within one week of viewing the film. All video summaries must be turned in to the instructor on or before **Wednesday 26 April**. Video summaries are not accepted during final exam week. You may select up to three from the following titles:

A Walk Through the ACEER Useful Plants Trail (in the Peruvian Amazon)

Aldo Leopold's Wilderness

AMATE: The Great Fig Tree

Ecology of the Forest Faces of the Rain Forest

Intimate Strangers: Symbiosis Manu: Peru's Hidden Rainforest

Natural Connections

Pollination

Pollination: The Insect Connection

Race to Save the Planet 5: Remnants of Eden

Seeds of Tomorrow Secret Life of Plants¹

Branching Out

Putting Down Roots

The Birds and the Bees

Plant Politics

Living Together

It's A Jungle Out There

Sexual Encounters of the Floral Kind

Spirit of the Rainforest

^{1.} This is from a PBS television series. Each video is about 50 minutes in duration. All have dramatic time lapse photography showing plant activities at accelerated speeds.

LECTURE SCHEDULE

Mon. Wed. Fri.	16 Jan. 18 Jan. 20 Jan.	Orientation; "What is a seed?" Seed structure, germination, and seedling development Flowers and floral anatomy
Mon. Wed. Fri.	23 Jan.25 Jan.27 Jan.	How do flowering plants reproduce? How do flowering plants reproduce? Pollination biology, the essence of mutualism
Mon. Wed. Fri.	30 Jan. 1 Feb. 3 Feb.	Why are plants important to us? (Or, what might life be like without them?) Useful plants and plant products Plant domestication, the development of agriculture, and the rise of civilization
Mon.	6 Feb.	History's Haves and Have-Nots: Geographic differences in the onset of food production. Apples or Indians? Why did peoples of some regions fail to domesticate plants?
Wed. Fri.	8 Feb. 10 Feb.	Molecular composition of plant cells Molecular composition of plant cells
Mon. Wed. Fri.	13 Feb. 15 Feb. 17 Feb.	FIRST HOUR EXAM Enzymes, catalysts of life. Factors which affect their action The structure of plant cells
Mon. Wed.	20 Feb. 22 Feb.	The structure of plant cells How do plant cells divide? Mitosis and the concept of totipotency. Totipotent cells can be used to clone useful plants.
Fri.	24 Feb.	Meiosis and sexual reproduction (MID TERM)
Mon. Wed. Fri.	27 Feb.1 Mar.3 Mar.	Cells, differentiation, and plant tissues Stems and leaves Leaves and roots
Sat. 4 Mar Sun. 12 Mar. SPRING RECESS		
Mon. Wed. Fri.	13 Mar. 15 Mar. 17 Mar.	Photosynthesis: "Harvesting the Sun" Photosynthesis Respiration: How plants consume sugar
Mon. Wed. Fri.	20 Mar. 22 Mar. 24 Mar.	SECOND HOUR EXAM Plant growth and development: hormones and tropisms Growth and development: How do plants see light? Discovery of phytochrome
Mon.	27 Mar.	Growth and development: photoperiodism and flowering

Wed. 29 Mar. How do plants respond to stress?

Fri. 31 Mar. Alternation of generations: the fern life cycle (fern allies if time allows)

Mon. 3 Apr. Moss life cycle as an example of bryophytes (liverworts if time permits)

Wed. 5 Apr. The pine, a gymnosperm

Fri. 7 Apr. Plant biotechnology: recent advances

Mon. 10 Apr. Plant biotechnology

Wed. 12 Apr. Principles of plant ecology

Fri. 14 Apr - Mon. 17 Apr. EASTER RECESS

Wed. 19 Apr. Plant ecology

Fri. 21 Apr. **THIRD HOUR EXAM**

Mon. 24 Apr. Plant ecology

Wed. 26 Apr. Biodiversity: How many species are present on earth, and how fast are they

disappearing? Why should we worry about species extinction?

Fri. 28 Apr. Conservation biology. Which species are important?

Mon. 1 May. - Sat. 6 May Final Exam Period

LABORATORY SCHEDULE

Many of the laboratory exercises come from the lab manual by Evert and Eichhorn. Others are based on handouts from the instructor. **Lab exercises are closely related to lecture topics, so plan to bring your lecture notes and text book to the lab.** You will have occasion to use both frequently. Laboratory assignments should be read <u>BEFORE</u> coming to the laboratory.

Four lab quizzes, each about 15 minutes, will be given during the semester. A practical exam emphasizing structure and function is scheduled for the last lab meeting.

<u>Date</u>	Subject Material	Assignments
19 Jan.	Start <i>Brassica rapa</i> seedlings & fern gametophyte cultures	
26 Jan.	The light microscope Plant cells	Topic 1-1 Topic 3-1
2 Feb.	Seeds, germination, and seedling development The structure of flowers	Handout Topic 2-1 Topic 18-7 to 18-9
		10pie 10 / to 10 3
9 Feb.	FIRST LAB QUIZ Cloning plants with tissue culture	Handout
16 Feb.	Enzyme lab: extraction and assay of catalase from bean leaves	Handout
23 Feb.	Effects of temperature and organic solvents or membrane permeability in beet root cells	Handout
2 Mar.	SECOND LAB QUIZ Examine tissue culture experiments (3 weeks) The nature of light Photosynthesis in excised leaf discs of <i>Phaseolus</i>	Handout Topic 7-7 to 7-10
Sat 4 Mar	Sun. 12 Mar. SPRING RECESS	
16 Mar.	Plant water relations: determination of water potential of potato tuber tissue, relevance of water potential to stomate regulation, sugar transport, and water movement through plants	Handout

23 Mar.	Examine tissue culture experiments (5 weeks) Mitosis: root meristems	Topic 4-1
	Meiosis	Topic 8-1
30 Mar.	THIRD LAB QUIZ	
	Three major tissue systems of plants and the cells which comprise them	Topic 2-3, 2-4
	Stems of dicots and monocots	Topic 23-1
6 Apr.	Leaves: dicots, monocots, C ₃ and C ₄ , abscission	Topic 24-1
	Roots: root systems, primary growth, origin of secondary roots, dicot & monocot roots	Topic 22-1
13 Apr.	FOURTH LAB QUIZ	
	The fern life cycle: an example of alternation of generations with dominant sporophytes	Topic 16-1
	Mosses have dominant gametophyte generations	Topic 14-5 to 14-7
Fri. 14 Apr	Mon. 17 Apr. EASTER RECESS	
20 Apr.	Marchantia, a liverwort	Topic 14-1 to 14-4
	Pine life cycle, an example of the gymnosperms	Topic 17-1 to 17-6
27 Apr.	PRACTICAL EXAM	

LIBRARY REFERENCE MATERIALS ON RESERVE

When you read the assignments in these books, prepare a short, one or two paragraph summary of each and **incorporate it into your lecture notes**. These reading assignments will be included on exams.

- Coe, Michael D. 1964. *The chinampas of Mexico*. <u>Scientific American</u>. 211 (1): 90-98. July issue
- Diamond, Jared. 1997. <u>Guns, Germs, and Steel. The Fates of Human Societies</u>. W.W. Norton & Company. Read chapters 4 8 in Part Two (The Rise and Spread of Food Production)
- Grube, Nikolai (Ed.). 2001. MAYA. Divine Kings of the Rain Forest. Konemann Verlags-gesellschaft. Read *Maya Agriculture* (pp. 70-79) and *Tortillas and Tamales* (pp. 80-83)
- Harris, Marvin. 1977. <u>Cannibals and Kings</u>. Random House. Chapter 3: *The Origins of Agriculture*. (p. 29).
- Judson, Olivia, 2002. <u>Dr. Tatiana's Sex Advice to All Creation: The Definitive Guide to the Evolutionary Biology of Sex.</u> Metropolitan Books. Henry Holt and Co. Chapter 4: *Swords or Pistols* (read pp. 60-65 on fig wasps)
- Leopold, Aldo. 1948. <u>A Sand County Almanac</u>. Ballantine Books. Read the last chapter, *The Land Ethic* (pp. 237-279).
- Western, David and Mary Pearl. 1989. <u>Conservation for the Twenty-first Century</u>. Oxford University Press. Several chapters will be assigned. See the following list of reading assignments.

35 mm SLIDE MODULES

Several modules of 35 mm slides and accompanying audio cassette tapes are available to supplement lecture topics. These are self instructional units and can be used in Reeves Library in special rooms equipped with a viewing screen. The slides in the modules advance automatically, and they are narrated with sound tracks on the cassette tapes.

Chemistry of carbohydrates and lipids

Proteins

Enzymes

Membranes

Plant tissue culture, the basic concepts

Photosynthesis

Respiration

Plant life cycles: alternation of generations in plants

TIME LINE FOR READINGS IN TALES OF A SHAMAN'S APPRENTICE (Plotkin, 1993)

Topics in Plotkin's book will be discussed at several points in lecture between 30 January and 3 February, so you should plan to read the book according to the following time line. In any event, be certain to complete the book prior to 13 February as it will be included on the first exam.

Assignment	Completio	n Date
Foreword Chapters 1 & 2	Friday	20 January
Chapters 3 & 4	Monday	27 January
Chapters 5,6 & 7	Monday	30 January
Chapters 8 & 9	Friday	3 February

SEMESTER READING ASSIGNMENTS

(For Raven et al. 2005. Seventh Edition)

Reading assignments are selected to supplement lecture topics and should be read **BEFORE** coming to class on the day that the topics are to be discussed. Most assignments are from the textbook. A few are from reference books on reserve in the library. For the items marked with an asterisk (*) additional reading assignments will be supplied in the form of handouts.

<u>Lecture Topics</u>	Assignments ¹
Orientation	REC, Ch. 1, pp. 1-13
Seeds, germination, and the development of the plant body	REC, Ch 22, pp. 502-509
Flowers, floral anatomy, and reproduction in flowering plants	REC, Ch. 19, pp. 434-451 REC, Ch. 20, pp. 465-474 REC, Ch, 22, pp. 497-502
Pollination biology	REC, Ch. 20, pp. 452-464

^{1.} REC = Raven, Evert, and Curtis.

Why are plants important to us? (useful plants and plant products)	Handouts REC, Ch. 21, pp. 475-495
Plant domestication and development of agriculture	Coe, M: The Chinampas of Mexico Harris, M. Ch. 3: Origin of Agriculture Grube, N. pp. 70-79 on Maya Agriculture and pp. 80-83 on Tortillas and Tamales Diamond, J. Chapters 4-8. A time line and study questions for this assignment will be distributed in class.
Molecular components of plant cells*	REC, Ch. 2, pp 15-28 Slide module: Chemistry of Carbohydrates and Lipids Slide module: Proteins
Enzymes and factors which affect their action*	REC, Ch. 5, pp. 89-101
Structure of plant cells*	REC, Ch. 3, pp. 35-58 REC, Ch. 4, pp. 71-87 Slide module: <u>Membranes</u>
Mitosis*	REC, Ch. 3, pp. 58-70
Totipotency and its importance in plant biotechnology	REC, Ch. 10, pp. 188-194
Meiosis*	REC, Ch. 8, pp. 141-162 (especially pp. 141-150)
Cells, differentiation, and plant tissues	REC, Ch. 23, pp. 510-527 Slide module: <u>Plant Cells and Tissues</u> (This slide module is particularly good.)
Stems and leaves*	REC, Ch 25, pp. 547-579
Secondary growth in stems	REC, Ch. 26, pp. 580-600

REC, Ch. 24, pp. 528-546

Roots*

Photosynthesis*

REC, Ch. 7, pp. 115-153. This is an **especially important** chapter, and it integral to the mission of the course.

Respiratory metabolism

In this chapter do not become bogged down with structural formulas for the respiratory intermediates. That is, do not set about memorizing all of them. Focus instead on the overall pathway and on functions inherent in the pathway. You will revisit respiration in more detail in later courses.

REC, Ch. 6, pp. 102-114

Plant growth and development

Hormones* REC, Ch. 27. pp. 603-621 How plants respond to their environment REC, Ch. 28. pp. 622-644 (especially phototropism, photoperiodism, and phytochrome)

Systematics and the major groups of living things

REC, Ch.12, pp.219-237

Alternation of generations*

REC, Ch. 17, pp. 376-377 (Fig. 17-8) Slide module: <u>Plant Life Cycles:</u> <u>Alternation of Generations in Plants</u>

Lower vascular plants (ferns and fern allies)*
Focus on the **fern life cycle** as the prototype for this group.

REC, Ch. 17. pp. 368-407 (pp. 389-398 most important, note **fern life cycle on pp. 396-397**)

Bryophytes*

In this chapter concentrate on the life cycle of **mosses** (pp. 362-363) and the **liverwort** *Marchantia* (pp. 354-355)

REC, Ch. 16. pp. 345-367

Gymnosperms*

Here the most important part of the chapter is pp. 414-427. **Pines** will be our one example on the gymnosperms (see pp. 418-419).

REC, Ch. 18. pp. 408-433

Plant biotechnology

REC, Ch. 10. pp. 180-197

Slide module: Plant Tissue Culture

Plant ecology¹

Biomes and global ecology

Biodiversity and conservation

REC, Ch. 31, Ecology (on the Web)

REC, Ch. 32, Global ecology (Web)

Leopold, last chapter of the book, The Land Ethic, pp. 237-279. Western and Pearl:

(1) Overview, pp.

- (1) Overview, pp.
- (2) Overview of Recent Extinctions (Jared Diamond), pp. 37-41
- (3) A Major Extinction Spasm: Predictable and Inevitable? (Norman Myers), pp. 42-49
- (4) Cultural Approach to Conservation Biology (Brian Horton) pp. 241-246

^{1.} The two chapters on ecology are not in the text. You can download them without charge from the publisher's Web site at **www.whfreeman.com/raven**. Save them as pdf files on your hard drive. You will need Adobe Acrobat v. 3 or higher. The files are fairly large (4.1 and 6.3 MB), and they will take a few minutes to download.
