Sociology 246: Basic Research Methods Fall 2010

Professor Virginia Adams O'Connell Office: PPHAC 315 Phone: 610-625-7756 Email: voconne1@moravian.edu

Abstract: This class is designed to expose students to the basics of social research for social scientists, with a particular focus on the methods used by sociologists. By the end of the course, students will have a foundation in generating social science research questions, drafting a research proposal, and choosing appropriate methodologies.

<u>Main Texts:</u> <u>Basics of Social Research: Fourth Edition</u>, Earl Babbie, and <u>Statistics: A Gentle</u> <u>Introduction</u>, Frederick L. Coolidge. In addition to these texts, supplementary readings and handouts will be distributed in class and posted on Blackboard.

<u>Assignments</u>: Assignments are due at the *beginning of class*. So the assignment listed on the syllabus under Week 2 is actually due on Wednesday of Week 2.

The central assignment for this course will be the creation of a *sociology research proposal*. The research proposal will basically have four main components:

- In the first section of the proposal, you will state your main research question with accompanying hypotheses. In this section, you will have to argue why it is important for sociologists to study this particular topic—addressing a core question of the field— "So what?" In this section, you will learn the writing tools to make a concise but strong argument to motivate the study.
- 2) In the second section, you will provide information on what is already known about the topic you have chosen and provide a concise literature review. How will your research add to the body of knowledge already in existence? Again, concise and clear writing will be stressed.
- 3) In section three, you will discuss the form your research will take. What is the expected length of the study? How many people will you study (what is your sample and how will you choose/access the sample)? What methodologies will you use? What are the benefits of using these particular methods?
- 4) In the final section, you will critique your own proposal—what are the strengths and weaknesses. There are always trade-offs no matter what methods you choose. Can you recognize what can be gained from your endeavors and what you simply will be unable to know at the end of the project?

I will provide detailed outlines which will describe in detail what information needs to be included in each section of the proposal. We will also look at examples of research proposals. You will also have opportunities to read and critique each other's work.

Each section of the proposal will be handed in at different points of the semester and you will have many opportunities to revise your submissions.

Each large assignment will be graded on the following 0.0-4.0 scale:

4.0: A 3.7: A-3.3: B+ 3.0: B 2.7: B-2.3: C+ 2.0: C 1.7: C-1.3: D+ 1.0: D 0.7: D-

Smaller assignments such as in-class quizzes or short out-of-class exercises will be graded with the following grades: v+, v, or v-. These grades roughly correspond to an A, B and C. The short assignments and quizzes will be weighted differently depending on the amount of time and effort it takes to complete the assignment. At the end of the semester, all of these points will be added together and you will get a corresponding letter grade for this accumulated short assignment work based on the total percentage of points earned.

Grade Distribution:

60% for the research proposal (roughly 15% for each section) 20% for short assignments 20% class participation

<u>Class attendance/participation is mandatory</u>. If you are going to miss a class, I expect that you will contact me prior to class to let me know, either by phone or by email. Although I understand that people might occasionally miss class due to illness or personal emergencies, patterned absences will result in a lowering of your class attendance/participation grade and I will contact your advisor/the dean's office. Regular attendance will yield a class attendance grade of a 3.0 (B). Participation will increase that grade upwards, and patterned absences will decrease that grade. Basically, everyone will start out with a B.

<u>Cheating/plagiarizing</u>: If any student is caught plagiarizing, you will automatically fail the class. If there are any questions about what constitutes plagiarism, please review drafts of your

assignments with me. Please also see Moravian College's Academic Honesty policy (on the college website) to review the institution's definitions of cheating and plagiarism.

Assignments:

I expect <u>assignments to be handed in on time</u>, on the day that they are due. Late assignments will be docked one full grade for each day that they are late. So an "A-quality" assignment that was due on Tuesday that is handed in on Wednesday will drop to a "B." If handed in on Thursday, the grade will drop to a "C." I know students occasionally run into computer/printer problems, and if you are in this situation, email me as soon as possible. If you are having a printer problem, you can send me your assignment as an attachment so that you can still get full credit for handing the assignment in on time. I do not have much sympathy for students who wait until a few minutes before class begins to print up their assignment and then discover that they are having trouble. So try to make it part of your schedule that you will finish and print up your assignments at least the night before the assignment is due. This way, you will have time to either solve your problem or contact me.

I also expect assignments to follow whatever *formatting and page instructions* given when the assignment is assigned. For example, if I assign an essay question that I suspect will take at least two pages to answer, I expect a full two pages of writing will constitute your response. This is two pages, word processed, double-space, one inch margins, Times New Roman, 12-point font, without additional spaces between your name and date at the top of the page, and between the title of your essay. Assignments that fall short of the page requirement will automatically lose points.

We will have a number of <u>in-class activities/quizzes</u> throughout the semester—this is another reason why regular class attendance is so important. These activities will help to solidify the concepts of the course. There will also be <u>sporadic short out-of-class activities associated with</u> <u>the class project(s)</u>. These two kinds of assignments will constitute the short assignment/quizzes grade. I expect people to keep up with the readings for the class, otherwise you will not be able to successfully complete the in-class activities.

Professor/Student dialogue: I highly value good communication between us, and I therefore encourage you to contact me at any time in the semester to talk about the class in general or your individual performance. Few things are as frustrating to me than to get to the end of the semester and find out someone struggled with some aspect of the course (for example, understanding the assignments!). If you do not understand some aspect of the course material, or my assignment instructions, then please send me an email, call, or stop by my office hours. I am more than willing to read and respond to drafts of your work, so please take me up on my offer to read work before final due dates. I typically ask for at least one week to turn work around.

Outline of Weekly Readings and Assignments:

Week 1: An introduction and review of the course as well as introduction to some basic research frameworks.

Chapter 1: A Gentle Introduction

Assignment: Dice rolling exercise! I want you to begin to understand that the probabilities we talk about in the social science are similar to the probabilities we associate with other human activities—in particular, game playing and gambling! Although we will allot a block of time towards the end of the semester on data analysis, we will do various activities throughout the semester to acquaint ourselves with probability theory and statistical analysis. The first activity will be to roll dice 100 times and record the distribution!

Week 2: Part One: An Introduction to Inquiry

Chapter 1: Human Inquiry and Science Chapter 2: Paradigms, Theory and Research *Chapter 2: Descriptive Statistics*

Assignment: First draft of research proposal statement.

Week 3: Chapter 3: The Ethics and Politics of Social Research

This week we will review the Nuremberg Code and the beginning of the concept of informed consent.

Chapter 3: Statistical Parameters

Assignment: Start reviewing/collecting the literature on your research topic, and work on expanding section I of the proposal.

Week 4: Part Two: The Structure of Inquiry: Quantitative and Qualitative

Chapter 4: Research Design

Assignment: Path analysis

Week 5: Chapter 5: Conceptualization, Operationalization, and Measurement

Assignment: Interpreting Data

Week 6: Chapter 6: Indexes, Scales and Typologies

Assignment: Start working on Section 3 of your proposal—what kind(s) of methodology(ies) is best suited for your research project?

Week 7: Chapter 7: The Logic of Sampling

Assignment: Continue working on Section 3 of your proposal, this time focusing on the question of your sample.

Week 8: Part Three: Modes of Observation: Quantitative and Qualitative

Chapter 8: Experiments

True experimental design is the gold standard of scientific research. Social scientists should have a firm understanding of this design, because every way that their research deviates from a true experimental design impacts the kinds of conclusions we can draw from the research.

Week 9: Chapter 9: Survey Research

Assignment: This week you will be asked to generate a number of survey questions, based either on your own study, or on a common theme chosen by the class. You will have to focus on the clarity and format of the question.

Week 10: Chapter 10: Qualitative Field Research

Assignment: Over the course of the next couple of weeks, you will be given a variety of short data analysis exercises, as well as a review of basic statistics. You will also be expected to continue to revise your proposals.

Week 11: Chapter 11: Unobtrusive Research

Assignment: During one class period this week, we will be doing some observation research during the class time period. You will then write up your observations and compare them to the notes/write-up conducted by a fellow student who observed the same social scene.

Week 12: Chapter 12: Evaluation Research

Assignment: Work on the final section of your proposal—the critique of your research design.

Weeks 13 and 14: In-class work on the research proposals and reviewing material not yet covered. We will take the last two weeks of the class to cover any material not yet covered in the class and to work collectively on the research proposals.
