

BIO100  
Principles of Biology  
Spring 2011

## Principles of Biology

### Pre-test

Here is the link to the [course pre-test](#). Please take it before class on Friday the 21st.

### Classes

Lectures are held in Room 202 (Mellon Lecture Hall), Collier Hall of Science  
Mondays, Wednesdays, and Fridays, 10:20 am to 11:10 am

### Lab

Lab for this course meet in Room 301, Collier Hall of Science  
Monday afternoons, 1:15 to 4:15

### Text

The text required for this course is the 1st edition of *What Is Life? A Guide to Biology*, by Jay Phelan (W.H. Freeman, 2010).

[Companion Website for the text](#)

BIO100  
Principles of Biology  
Spring 2011

## Course Objectives

My primary goal for BIO100 is to give you an appreciation for, and understanding of, Science. Yes, that's "Science" with a capital "S" because everything we will be discussing is (to some extent) true of all branches of science. And for most of you, this is the last formal exposure to scientific subjects that you'll ever have, so it is (as I hope you'll see over the course of the semester) very important to me that you finish this course equipped to cope with all the "scientific" puffery that you'll come up against for the rest of your lives.

Of course, the fact that we're studying biology specifically is great, because biology is the bestest, most interesting of the sciences. And you can believe that, because I'm a Scientist, and therefore completely objective and rational, all of the time.

Pffffft. Right.

Okay, more seriously, here is a more detailed list of what I want you to learn in this course:

- why a basic understanding of science is important for every educated person today: science is one of the pillars of a liberal arts education
- the strengths (and weaknesses) of the scientific method
- the meaning of terms such as "hypothesis" and "theory" in a scientific context
- an appreciation of how science changes, and will continue to change in the years ahead
- the ability to approach a problem scientifically
- to design and carry out a good experiment to test your hypotheses
- to be able to judge the validity of scientific claims made by others

In short, by the end of this semester I hope that you will feel (and be!) fairly self-sufficient in navigating the ins and outs of basic science. More importantly, you'll feel confident in being able to learn what you need on your own — no one course, or even four years of them, can prepare you with everything you're going to need to know. And you'll need it — people are going to try and snow you with "evidence" and "proof" for the rest of your lives, and you need to be able to distinguish the good from the bad.

# BIO100

## Principles of Biology

### Spring 2011

## Course Components

First, a note on grading. I do not grade on a curve, so I hope that each of you will do your best to help your fellow students: if they benefit, it does you no harm. In fact, one of the best ways to learn something is to explain it to someone else, so talk to your classmates (see [Studying Biology](#) in the "Policies" section).

Here are the basic (by which I mean "important" (by which I mean "they affect your grade" (of course))) components of this course — in alphabetical order.

- [Attendance](#)
- [Exams](#)
- [Lab Notes](#)
- [Lab Reports](#)
- [Miscellaneous Assignments](#)
- [Participation](#)

## Attendance

In my experience, you're going to be much happier (in the long run, at least) if [you're in class](#). To emphasize how important I think attendance is, every day you're in class (and awake) is worth 2 points toward your final grade. Being in lab is worth 5 points. If you're late, I dock 1 point for every 5 minutes late (or fraction thereof).

## Exams

There will be four exams, not including the final. Each will focus primarily on the material covered since the previous exam, but anything covered during the semester up to that point is fair game. The final will be semi-cumulative: about half of the exam will focus on material since the previous hour exam, but the other half will range over material from the entire semester. Barring extenuating circumstances (and it is entirely up to me to decide what is an acceptable circumstance), no make-up exams will be given. The four hour-exams will each contribute up to 100 points toward your final grade, and the final exam will contribute up to 200 points (but see my policy on [extra credit](#)).

## Lab Notes

Keeping an accurate, legible, and complete laboratory notebook is an *absolute requirement* of this course. Your notebook **must be bound** (no ring binders, no spiral notebooks), but beyond that I don't care; feel free to use one of those cheap tablet notebooks. If you want to re-copy

your notes, that's fine, but I am only concerned with your "official," written-in-lab notes.

I will examine your notes weekly and give you feedback on them. I will collect your notebooks at the end of the semester and evaluate them. Your lab notes will be worth 100 points, and will also be available to you for a portion of the final exam, so do a good job with them!

## Lab Reports

I will be asking for lab reports for almost every lab we do. Usually these will be in a straightforward short-answer format, but I will let you know what I expect for each lab as they arise. Each report will be worth 100 points.

For group reports, I expect them to be group efforts. Every group member's name should of course appear on it, and I want every member to sign the front/top somewhere, indicating that he or she has read the final report and accepts responsibility for its contents.

I will count only your top 10 lab reports toward your final grade. This means that you only need to turn in 10 lab reports over the course of the semester (but may of course turn in more).

## Miscellaneous Assignments

I will give occasional miscellaneous assignments over the course of the semester. These will be worth whatever points I announce at the time. Late assignments **will not be accepted**. I anticipate that there will be a total of 100 to 200 points in this category by the end of the semester.

## Participation

Class participation will necessarily be somewhat subjective, but will encompass just that: participating in class. Asking questions, answering questions, being prepared to discuss whatever topics arise, doing your share of the work in lab — you're not children, you know what is meant by the term "participation." I assume a certain amount of participation on everyone's part; I will award up to 50 points for participation "above and beyond" at the end of the semester toward your final grade.

# BIO100

## Principles of Biology

### Spring 2011

## Course Policies

Below you will find various course policies, including:

- [Attendance](#)
- [Reading](#)
- [Late Assignments](#)
- [Extra Credit](#)
- [Food](#)
- [Cell Phones](#)
- [Lab Conduct](#)
- [Group Lab Reports](#)
- [Studying Biology](#)
- [Academic Honesty](#)
- [Accommodations](#)

## Grading

I'm going to be using the point system for this course, so you don't have to worry about calculating percentages for individual components. I'll try to keep an up-to-date total here on the website, so you can always determine your grade so far by comparing what you've earned with the max possible. (And don't you just hate Max, that little weenie?) Given my [grading scale](#), you can therefore calculate your own grade in the course at any time.

I've laid out the [course components](#) and their point values separately, but to summarize:

Lecture Attendance	80 points
4 Hour Exams	400 points total
Misc. Assignments	100-200 points
Final Exam	200 points
Laboratory Attendance	60 points
Laboratory Notebooks	100 points
Laboratory Reports	1000 points
<b>Anticipated Total</b>	<b>1940-2040 points</b>

I reserve the right to tweak these distributions as I see fit: if for example no one appears to be doing the reading, I may institute short, sporadic quizzes. These will in all likelihood be given in the first few minutes of class, and no make-ups will be given. In order for them to be taken seriously, I will have to shoehorn them into the grading scheme outlined above.

Here is the grading scale I use in all my classes:

numeric grade	letter grade
93.3 - 100	A
90.0 - 93.2	A-
86.7 - 89.9	B+
83.3 - 86.6	B
80.0 - 83.2	B-
76.7 - 79.9	C+
73.3 - 76.6	C
70.0 - 73.2	C-
66.7 - 69.9	D+
63.3 - 66.6	D
60.0 - 63.2	D-

Just to review, this is what the Student Handbook has to say about grades:

### **A and A-**

These grades are given for achievement of the highest caliber. They reflect independent work, original thinking, and the ability to acquire and effectively use knowledge.

### **B+, B, and B-**

These grades are given for higher than average achievement. Evidence of independent work and original thinking is expected.

### **C+, C, and C-**

These grades are given when the student has devoted a reasonable amount of time, effort, and attention to the work of the course and has satisfied the following criteria: familiarity with the content of the course, familiarity with the methods of study of the course, and active participation in the work of the class.

### **D+, D, and D-**

These grades are given for unsatisfactory work, below the standard expected by the College. They indicate work which in one or more important aspects falls below the average expected of students for graduation. The work is, however, sufficient to be credited for graduation, if balanced by superior work in other courses.

## **Attendance**

Being in class is important. Based on my experience with this course, [it makes a difference](#). To help motivate you to be here, I will be awarding points toward your final grade for attending class (and being awake and attentive — if you need to sleep that badly, do us both a favor and stay in bed). As you will discover, there will be no lecture notes for me to give you should you miss a meeting, no little PowerPoint handouts.

If you are going to be absent from class or (Heavens forbid!) lab, please do me the courtesy of letting me know in advance if at all possible. Don't forget that it is *your* responsibility to notify me if you will be away for a field trip, sporting event, or other school-related function. It is not my responsibility to keep up with all the myriad activities which you might be involved in, according to the [Student Handbook](#).

## Reading

In this course, the reading is critically important. Classtime will be spent discussing the reading for that day; [I will not just be lecturing in this course](#). If you don't keep up with the reading — and by that I mean **active** reading, not just using a highlighter — you won't be able to keep up in class, you won't fully understand what's being taught, and the class will rapidly become a waste of time for you.

## Late Assignments

Assignments turned in late will not be accepted. Period.

## Extra Credit

On a 100-point hour exam, I will give you 110 points-worth of questions. Thus, you can miss (nearly) 10% of the questions on any hour exam and still get the full 100 points. With the exception of these additional points on exams, there will be no opportunity for extra credit in this course. Spend your energy learning the course material; "extra credit" for doing other stuff is a sham and a cheat.

## Food

No eating in class, unless you can convince me it's medically necessary. *I don't eat in class!*

## Cell Phones

[Cell phones](#) are tools of Satan. They are without significant positive value in my world and while I don't expect you to share my view of them, I expect you to spare me from being rudely reminded of their existence. If you are expecting an *urgent* phone call while in class or lab, alert me to that fact ahead of time. Otherwise, if your cell phone goes off in class or lab, you might as well pack up your things and go home, because I won't give you any credit for being there. Some day this will be looked on as one of my loveable eccentricities, but until then you'll just have to put up with my sociopathy.

## Lab Conduct

There is to be **NO** food or drink in the lab at **ANY** time. Rules have gotten stricter, fines have gotten much higher, and the government is coming after undergraduate institutions like never before. If I see any comestibles or potables in lab you will be docked points in accordance with my mood; if I see you put anything into your mouth while you're in the lab, I may well dock you several hundred (yes, *hundred*) points. This is a serious infraction of laboratory protocols.

The **ONLY** exception to this policy is when we are doing experiments with food — I will let you know in advance what is permitted in these labs.

The only thing worse than eating or drinking in lab is endangering other students or their

data, whether through carelessness or malice. If I find anyone doing something which might result in harm to another student or compromise their experimental results, I will fail the perpetrator for the course. I am by and large a fairly easy-going guy, but there are some things which are simply beyond the pale; this is one of them.

## Group Lab Reports

For certain labs I will require group (rather than individual) lab reports. When submitting group reports, please be sure to:

- Do not include the questions in your report — I *know* the questions!
- Use "we", not "I" — this is to be a *group* effort.
- Include the title, date, and the names of your group members.
- Every member of the group must initial the report, indicating that they are satisfied with it and agree to its contents.

If you have any questions about this format, please don't hesitate to ask me.

## Studying Biology

[Science](#) is a collaborative venture. I urge you to get together with your fellow students as much as possible to study the material for this course in groups. Discussing problems, studying for exams with other students, and asking each other questions on the reading assignments are all examples of activities which will benefit you and which I encourage. Obviously you cannot consult with others during exams or quizzes, but the homework and lab reports may be something of a grey area for many of you. For my courses, you must prepare your own answers to assigned problems, but I feel that getting together with other students in the course to discuss and think through problems together is not only perfectly acceptable, it is a very good idea. If you have arrived at what you believe to be the correct answer, put it aside for fifteen minutes before writing it down; this way you can be more confident that you really know what it is you're saying, and your answers won't be identical to your partners'.

Note that the idea of collaborative learning in this way does not mean that you should ask for answers from others who have already taken this or a similar course, nor should you necessarily just accept an answer from a classmate whom you think is likely to be right. Everybody is mistaken sometimes, and if you don't understand *why* his or her answer is the right one, well, then you don't understand it. And that is not where you want to be. Conversely, if you're sure you've got the right answer, don't just tell your study group and be done with it. Try to help them arrive at the same conclusion you did step by step; someone else may come up with a very different view of the problem which forces you to rethink your approach. And rethinking your approach, even if it doesn't turn out to change your mind about your answer, is critical to your success as a scientist, lawyer, businessperson, whatever. It's one of those skills that you should be constantly honing.

My concern is not that you "learn" biology, seeing it as a (very large) pile of facts, but that you **understand** it. Your fellow students and I are resources to help you; it's up to you to do the work necessary to gain that understanding.

You should expect to spend *at least* 2 hours studying on your own for every hour in the classroom. At a *minimum*. That's true for every class, not just mine. If you're content to just slouch through, willing to trade a better grade in the course for whatever you think is more

important than your studies, you're welcome to do so. But if you want to excel, not only for the sake of a higher mark on your transcript, but also for the sake of your education, you owe it to yourself to put in enough effort that you can honestly say to yourself at the end of the semester, "I did my best, and I learned as much as I could in that course." If you do, I'll do everything I can to make this a worthwhile experience for you.

## Academic Honesty

I adhere to the [Academic Honesty policy](#) of the College. There is nothing more important to me than personal integrity - not biology, not happiness, not power, nothing — and I conduct myself and all of my classes in that spirit. If you're not familiar with College policy, you should be.

## Accommodations

Per Moravian College policy: "Students who wish to request accommodations in this class for a disability should contact Mr. Joe Kempfer, Assistant Director of Learning Services for Disability Support, 1307 Main Street (extension 1510). Accommodations cannot be provided until authorization is received from the office of Learning Services."

Principles of Biology  
Spring 2011

## Syllabus

Meeting number	Date	In-Class	Background Reading
1	Mon., Jan. 17	organizational meeting	
2	Wed., Jan. 19	Science and its eponymous method	chapter 1, pp. 1–16
3	Fri., Jan. 21	The power (and limits) of science	chapter 1, pp. 17–30
4	Mon., Jan. 24	Atoms, water, and carbohydrates	chapter 2, pp. 36–55
5	Wed., Jan. 26	Lipids, proteins, and nucleic acids	chapter 2, pp. 56–72
6	Fri., Jan. 28	Cells and membranes	chapter 3, pp. 78–100
7	Mon., Jan. 31	What's special about eukaryotic cells?	chapter 3, pp. 101–118
8	Wed., Feb. 2	Energy and photosynthesis	chapter 4, pp. 124–142
9	Fri., Feb. 4	Cellular respiration	chapter 4, pp. 143–154
10	Mon., Feb. 7	Hour exam	chapters 1–4
11	Wed., Feb. 9	DNA structure and function	chapter 5, pp. 160–178
12	Fri., Feb. 11	Biotechnology	chapter 5, pp. 179–204
13	Mon., Feb. 14	Cell division and mitosis	chapter 6, pp. 210–224
14	Wed., Feb. 16	Meiosis and sex determination	chapter 6, pp. 225–244
15	Fri., Feb. 18	Genetics and heredity I	chapter 7, pp. 250–264
16	Mon., Feb. 21	Genetics and heredity II	chapter 7, pp. 265–278
17	Wed., Feb. 23	Evolutionary mechanisms	chapter 8, pp. 284–303

18	Fri., Feb. 25	Selection and evidence for evolution	chapter 8, pp. 304–324
19	Mon., Feb. 28	Behavior and its evolution	chapter 9, pp. 330–347
20	Wed., Mar. 2	Gender, reproduction strategies, and communication	chapter 9, pp. 348–364
21	Fri., Mar. 4	Hour exam	chapters 5–9
	Mon., Mar. 7	No class (Spring Break)	
	Wed., Mar. 9	No class (Spring Break)	
	Fri., Mar. 11	No class (Spring Break)	
22	Mon., Mar. 14	Life's origin and species	chapter 10, pp. 370–382
23	Wed., Mar. 16	Macroevolution and biodiversity	chapter 10, pp. 383–402
24	Fri., Mar. 18	Vertebrates	chapter 11, pp. 408–426
25	Mon., Mar. 21	Invertebrates	chapter 11, pp. 427–442
26	Wed., Mar. 23	Plant evolution	chapter 12, pp. 448–461
27	Fri., Mar. 25	Flowering plants and fungi	chapter 12, pp. 462–478
28	Mon., Mar. 28	Bacteria	chapter 13, pp. 484–496
29	Wed., Mar. 30	Archaea, protists, and viruses	chapter 13, pp. 497–510
30	Fri., Apr. 1	no class	
31	Mon., Apr. 4	Hour exam	chapters 10–13
32	Wed., Apr. 6	Population ecology I	chapter 14, pp. 516–525
33	Fri., Apr. 8	Population ecology II	chapter 14, pp. 526–544
34	Mon., Apr. 11	Ecosystems: abiotic aspects	chapter 15, pp. 550–568
35	Wed., Apr. 13	Ecosystems: biotic aspects	chapter 15, pp. 569–582
36	Fri., Apr. 15	Biodiversity and extinction	chapter 16, pp. 588–600
37	Mon., Apr. 18	Human impacts on biodiversity	chapter 16, pp. 601–618

38	Wed., Apr. 20	Hour exam	chapters 14–16
	Fri., Apr. 22	No Class (Easter Break)	
	Mon., Apr. 25	No Class (Easter Break)	
39	Wed., Apr. 27		TBA
40	Fri., Apr. 29		TBA
	Wednesday, May 4 8:30 am	<b>FINAL EXAM</b>	

Life is fluid, so this syllabus is subject to change. I may have to change the syllabus as the semester progresses, but this is certainly preferable to rigidly adhering to some timetable in lockstep. So come to class and you'll always know what's going on with the syllabus; changes will of course also be posted here, but you should be in class anyway!

## Professor Jones

If you ever have questions that you can't answer yourself, realize that there are a lot of resources available to you: if your classmates can't help you, feel free to ask me. This is part of my job, and one which I don't shirk. Depending on what the problem is, the most reliable method is probably email (I sometimes don't realize I have voicemail for a day or two). My email address is `cjones [at] moravian [dot] edu` and my office (and lab) phone number is 610-861-1614.

If you need to speak with me sometime when I'm not on campus (a rare event!), call me at home any time between 9 am and 9 pm. Students often tell me they don't feel comfortable calling me at home because they think I mind. Consider the logic here: there's nothing that says I have to give you my home phone number, yet I have done so in class. So *why* would I give you that number if I didn't want you to use it? Note that "use" is not the same thing as "abuse": don't call me at 3 am the day before an assignment is due and expect much sympathy (or pleasant conversation)!

Here's a copy of [my current class schedule](#). My official office hours are from 9 am to 10 am Mondays, Wednesdays and Thursdays. That said, official hours are all but irrelevant to me. If I'm not in my office (Room 310, Collier Hall of Science), try my lab (Room 233, Collier Hall of Science — between the elevator and the loading dock on the main floor). Feel free to get hold of me any time; if I can't spare the time to talk then, I'll tell you so, and we can set up an appointment at our mutual convenience.
