Moravian College Astronomy—Fall Term 2014

Mon./Wed. (EASC-130 PN) and Tues./Thurs. (EASC-130 PM), 6:30 p.m. to 9:30 p.m.

<u>Instructor</u>: Gary A. Becker; <u>Phones</u>: Cell-610-390-1893 / Moravian-610-861-1476 <u>Office</u>: 113 Collier—Mon./Wed. and Tues./Thurs. 6 pm/or by appointment; office or astronomy lab <u>E-mail</u>: <u>garyabecker@gmail.com</u> or <u>garyabecker@moravian.edu</u>

Web Page: Moravian College Astronomy, www.astronomy.org

<u>Moravian astronomy classes meet</u> in the Astronomy/Geology lab, Room 106, in the basement of the Collier Hall of Science.

<u>Required Texts</u>: ^{Becker's} Astronomy Survival Notebook (BASN)... Universe: The Definitive Visual Guide (UDVG), General Editor, Martin Rees, and a reading manual (RM) containing Xeroxed articles... Lender copies of the latter two texts will be supplied by your instructor at no cost. ^{Becker's} Astronomy Survival Notebook will cost \$25 and is your main textbook. Checks will be made payable to Moravian College Astronomy. Cash will also be accepted. Universe: A Definitive Visual Guide and the reading manual are for supplemental assignments and should not be marked up in any way. Students will always bring to class their Astronomy Survival Notebook, a calculator, a flashlight and a Smart/Cell Phone. Your smart phone may be substituted for a calculator (non-exam situations), as well as a flashlight. Universe: A Definitive Visual Guide and the reading manual do not have to be brought to class. If you own or can borrow binoculars, bring them to class on nights when observing will take place.

About this Syllabus: Consider this syllabus an evolving/working document helping to keep you and your instructor on track. There will be changes. Be more aware of the classes (**Cl**) than the dates. The class numbers will be the order of my presentations. Planetarium programs will most likely fall on the indicated dates unless inclement weather causes problems. An <u>underlined date</u> indicates Mon.-Wed./Tues.-Thurs, classes will be combined on one of those two dates or there is a planned field trip.

COURSE OBJECTIVES:

- 1. To provide students with an accurate up-to-date informational portrait of the science of astronomy.
- 2. To show the validity of the process of science in problem solving situations.
- 3. To demonstrate the interdisciplinary nature of astronomy as it relates to other branches of science, mathematics, and the humanities.
- 4. To provide students with the opportunity to become familiar with the many facets of the night sky through planetarium demonstrations, computer simulations, and real time observations of the night sky.
- 5. To provide the type of classroom experience in which a nonscience oriented individual feels that he or she has the opportunity to succeed.

<u>Course Objectives from the Previous Instructor, Dr. Joseph Gerencher</u>... Students will understand the basic elements of time, date, seasons, positional coordinates, and observed celestial motions, the appropriate methods by which celestial objects and systems are observed, studied, presented, and analyzed, the use of the telescope [and binoculars] for making astronomical observations, a reasonable sense of scale concerning sizes, distances, brightness, masses, speeds, forces, and processes application of appropriate fundamental scientific principles to study celestial objects and systems, and the interaction and evolution of celestial objects and systems through time. *Kindly consider these also. Gary A. Becker* **Determination of Grades:** Refer to ^{*Becker's*} *Astronomy Survival Notebook*, pp. xvii-xviii. Moravian's +/- grading policy will be adhered to as noted below:

	A =>93%,	A- =>89.5%<93%,
$B+<\!\!89.5\%=\!\!>\!\!87\%,$	B <87% =>83%,	B- =>79.5%<83%,
C+ <79.5%=>77%,	C <77% =>73%,	C- =>69.5%<73%,
D+<69.5%=>67%,	D <67% =>63%,	D- =>59.5%<63%,
F <59.5%		

<u>Students always have a right to know their grades</u>. Grades will normally be available for inspection prior to or after class. Grades will never be posted.

<u>Participation</u>: If you have a question and do not ask it, you do yourself and me a disservice. Your chances of learning specific concepts are diminished, and I get a false sense of accomplishment, neither of which is good. **Your participation is genuinely encouraged and it will be rewarded in your grade.** It becomes boring if information is flowing from only one direction. STUDENTS HAVE A RESPONSIBILITY TO HELP TO KEEP CLASSES INTERESTING AND DYNAMIC. This will also help me to achieve at my greatest potential.

<u>Attendance Policy</u>: Students will sign in when they arrive to class. Students are expected to be in class on time (6:30 p.m.), in a state of preparedness, and attend all classes. Students will receive a bonus of 10 free points if they are present for all classes. Excused absences will receive a bonus deduct of four points for the first absence and three points thereafter until zero is attained. There will be no exceptions. Pupils who receive an excused absence will be expected to provide legitimate, documented proof about why they were absent to avoid penalty. The excuse must be valid for the day(s) of absence. If you skip class after the break, or before an observing session, I'll consider your absence unexcused for the entire class period. A penalty structure for unexcused absences will be as follows:

Classes Missed:	0	1	2	3	4	5	6	EVENT	7	BLACK HOLE
Reward/Deduct:	+10	-1 +	-2 +	-4 +	-8 +	-16 -	+-32 +	HORIZON	-64	OF DEATH
Total Penalty Appl	ied	-1	-3	-7	-15	-31	-63		-127	YOU FAIL—

<u>Unexcused absences</u>, in addition to receiving an attendance deduct, your grade may result in a zero for all class activities missed or assigned during the time when you were AWOL.

<u>If you are going to be absent or late, please contact your instructor</u> so that he knows where you are. It makes for a smoother running class and a better relationship between student and teacher.

<u>Academic Honesty Policy</u>: This will be followed as per the Moravian College Catalog and online resources at, <u>http://www.moravian.edu/studentlife/handbook/academic/academic2.html</u>. Put in very plain English... If you cheat and you get caught, you will fail the exam or quiz or maybe even the entire course. You may be forced by Moravian College to change your major, particularly if you are planning a career in education.

Learning Disabilities: Students who wish to request accommodations in this class for a disability must contact Ms. Elaine Mara, assistant director of academic support services in the lower level of Monocacy Hall, or by calling 610-861-1401. Accommodations cannot be provided until authorization is received from the Academic Support Center.

Laptops/Notebooks are not permitted in class unless permission is given to use them by your instructor.

<u>Smart/Cell Phone Policy</u>: Please silence your smart/cell phone when in class. Unless you are using it for an astronomy related activity, cell/smart phones should be kept from view. Using a smart phone in class to look up information pertinent to the ongoing discussion, or as a calculator in a non-testing situation is permitted. Emergencies do happen, so if you absolutely need to use your phone for a private communication during class, kindly inform your instructor about this situation and please feel free to leave the classroom to make your call. I consider text messaging during class time to be rude behavior. During non-testing breaks, cell phone use is always permitted. Consider the educational process to be similar to live theater. The actors and audience need to communicate with each other in order to understand the plot fully. Distractions hurt that process.

<u>Electronic Recording of Class Presentations Unless Specifically Approved by</u> <u>Administration</u> is not permitted, and violators will be prosecuted within the guidelines of the Moravian College Code of Conduct.

Food: Class time is not mealtime. Please keep snacking to a minimum unless it is a medical necessity. The preferred drink of choice is water, but I will be a little more tolerant here. If you make a mess, please be considerate of others and clean it up!

Astronomical Observation Sessions: Quite frequently when the weather permits, class observations will be made from the Collier Rooftop Observatory. At least one field experience will be devoted to viewing the heavens from a dark site, and another from a more urban location. Conditions can be windy and cold, especially during late fall, winter, and early spring. On clear nights, students should bring to class the extra protection needed for the head and hands in addition to normal winter clothing worn during the cold season.

AND THE REST WE'LL MAKE UP AS WE GO ALONG... (If necessary)

MEDICAL EXCUSE NOTE POLICY Moravian College

Introduction:

A *Statement of Absence from* Class form can be found on the back of this paper or it can be requested by e-mailing your instructor.

Moravian College Rationale:

This policy is congruent with those campuses nationwide that recognize the adult relationship between college students and their instructors. Attendance/ participation policies related to specific courses should be outlined in class syllabi and communicated to students by their instructors. Sickness is only one of the many reasons that a student may not attend class. Ultimately, attending class is the responsibility of a student. The Health Care providers at the Health Center cannot be expected to write excuse notes for illnesses or problems for which we have never provided care. A student request for a note stating "I was sick last week (or last month) and could not attend class" is unreasonable!

Moravian College Policy:

- An excuse note will be written only in a case where the student has been treated by one of our providers and they have deemed it necessary for the student to be out of class. Under no circumstances will the diagnosis be placed on the note unless requested by the student.
- If the illness is over a prolonged period (over 3 days) Learning Services will be notified who then in turn will e-mail each of the student's professors. Details will only be given with the student's permission.
- Students frequently have medical, psychological conditions, illnesses or injuries that may cause them to miss class. These situations will be handled individually by our providers if they are involved in their care.
- In the event that a note is required by the professor in cases other other than the above circumstances, the following form should be filled out by the student and given to their professors. The Health Center <u>WILL NOT</u> be involved.

STATEMENT OF ABSENCE FROM CLASS Moravian College

1.	Student Name:									
2.	Department & Course:									
3.	Date of Absence:									
4.	Instructor:									
5.	Reason for Absence:									
6.	 In case of absence due to illness, answer the following: Did you visit the Health Center? 									
	Did you see another Doctor?									
	Doctor's name									
	• If your answers to (a) or (b) are "NO" please give the name of someone who c vouch the fact that you were ill?	an								
	Name of person									
	Phone number									

I certify that the above facts to be true to the best of my knowledge and belief. **I give permission** to my professor to verify that the above information is true. Finally, I understand that I subject myself to disciplinary action in the event the above facts are found to be false.

Signature: _____

Date: _____

Please be advised that falsifying excuses for an absence from classes, examinations, or other course requirements is considered a violation of the Academic Honesty Policy. Students found to have falsified an excuse will be charged with academic dishonesty. At a minimum, the penalty will be a zero for the assignment in question; however, course failure, suspension, or expulsion from the College, are other possible consequences of falsified absence notes.

ASTRONOMY SURVIVAL NOTEBOOK MORAVIAN COLLEGE STUDENT FOREWORD

ASTRONOMY, as the author of this book teaches it, is an elective designed for nonscience majors at the undergraduate college level who have always wanted to know more about the universe that surrounds them. The major areas of focus will include a through understanding of the sky and its motions, the life history of stars, and the characteristics of the solar system and its formation. A myriad of topics come into play when those three focus areas are considered. Specific lessons can be seen by visiting the syllabus which outlines the order in which course material will be presented during the semester.

I am not in agreement with how astronomy is currently being taught at the university level. Most professors attempt to teach the subject in its entirety, glossing over discussions, such as the night sky, eclipses, lunar phases, and the seasons—practical topics that should be known and understood if a person is to be considered well educated. As a result of simply completing the text by the end of the course, no topic, concept, or idea is covered in sufficient depth or with enough repetition to become permanently digested by the average student. In addition, many topics become simply exercises in mathematical analysis with the instructor completing the lesson to an audience tuned out and turned off. My goal will be to concentrate on fewer topics, cover them to a greater depth, and supplement and reinforce information with appropriate activities and visuals. This approach will hopefully lead students to a better understanding of the underlying principles and methodologies which guide all scientific thought.

I like to think of astronomy as "the beautiful science." Aesthetics has always been the chief motivator for my lifelong fascination about the heavens. Because of astronomy's inherent visual appeal and the mysteries surrounding distant places, I became interested in understanding the science behind the pictures that I was viewing as a kid and young adult. It's been a journey that started back in the late 1950's when I witnessed a shooting star sparkle across a windy autumn sky on my way to a neighborhood Cub Scout meeting.

This text and the astronomy course in which you are enrolled continue to evolve. Students are always encouraged to consider this book as a working copy and to make suggestions for its improvement. If you find an error, please take the time to tell me about it. I am never offended by students who are attempting to improve the academic landscape of this class. Although the lessons are mainly descriptive in nature, they often will have analytical aspects, including some mathematics. Don't panic about this fact. We will get through it together successfully, and you will understand what is happening. Keep a positive attitude and ask lots of questions, follow my suggestions and instructions, complete work on time in an orderly and neat fashion, and you will be on the fast track for a successful experience in this course.

In order to get the most from this program, I have a website, <u>www.astronomy.org</u> which should help contribute to the enjoyment and assimilation of the instructional material. The links associated with *Moravian Astronomy* (accessed by clicking your class picture), Astronomy, StarWatch, *Programming*, Astrophotography, and Resources should prove to be particularly useful. I also recommend the online astronomy articles found in Wikipedia as helpful and generally well written. Although the Internet is an excellent tool for gaining valuable and particularly timely information about astronomical topics, there is a catch. A great deal of the general, online material has no peer evaluation, can be opinionated, and many times is laced with errors. Readers, beware!

Thank you for perusing my intentions for this curriculum by reading the "Student Foreword," and much success as we journey together through the contents of this course. Ad Astra!

Gary A. Becker December 5, 2013

*** BECKER'S *** ASTRONOMY SURVIVAL NOTEBOOK

DESCRIPTION OF CURRICULUM: ASTRONOMY is a course designed for individuals who have always wanted to explore the universe around them. Topics of discussion will include lessons on astronomical misconceptions, archaeoastronomy (astronomy of the ancients), eclipses, instrumentation, the evolution and characteristics of the solar system, and the life and death of stars. Students will also gain familiarity with the night sky through planetarium visits and observations.

COURSE OBJECTIVES:

- 1. To provide students with an accurate up-to-date informational portrait of the science of astronomy.
- 2. To show the validity of the process of science in problem solving situations.
- 3. To demonstrate the interdisciplinary nature of astronomy as it relates to other branches of science, mathematics, and the humanities.
- 4. To provide students with the opportunity to become familiar with the many facets of the night sky through planetarium demonstrations, computer simulations, and real time observations of the night sky.
- 5. To provide the type of classroom experience in which a nonscience oriented individual feels that he or she has the opportunity to succeed.

<u>GRADING PROCEDURE</u>: Students' semester grades will be determined by the number of points accumulated, divided by the total number of points possible. An attendance grade and a participation grade will then be added to this numerical percentage to produce the final grade. Semester grades will be accrued from the following criteria:

- 1. **Examinations:** There will be two examinations. They will not be cumulative. The first exam will occur after the traditional Moravian midterm date. The second test will occur on the night of the final exam. The tests will be mainly objective in nature and compiled from classroom discussions. The exams will be difficult will account for about one third of your final grade. Grades in an exam will always be scaled upward, if warranted. Grades will never be scaled lower.
- 2. <u>**Quizzes:**</u> Numerous announced quizzes will be administered during the semester. Each quiz will be approximately 10-25 minutes in duration and usually consist of questions that will be answered in written form. Questions may include material that students must acquire from the Internet. Grades will never be scaled.
- 3. <u>Laboratory Exercises</u>: Laboratory exercises will be assigned to students as class work and homework assignments. Accuracy and clarity, as well as neatness, will be used as criteria for grading purposes. When graphs or drawings are submitted for correction, the following weights will be assigned: accuracy (60% of grade), labeling (20% of grade), and neatness (20% of grade).

- 4. <u>Work that is late</u>: Generally work that is submitted late will receive a lower grade than work submitted on time. Failure to complete assignments within a reasonable period of time will result in a reduced grade or a grade of zero.
- 5. <u>Absenteeism</u>: Students are responsible for making up all missed work when legally absent. Illegal absences may not be granted that same privilege depending upon circumstances.
- 6. **<u>Participation</u>**: Meaningful participation will be acknowledged through additional credit that could significantly alter a student's grade. A student's grade, however, will never be lowered if he or she chooses not to participate in classroom discussions.
- 7. <u>Free Points</u>: Students can accumulate free points from the "What is it" questions and other exercises. These points are added only to the numerator of the final grade fraction.

8. Notebook Information:

- a. Each student is required to keep a notebook containing all information that is given in class and any materials otherwise assigned. Your *Astronomy Survival Notebook* should serve this purpose well. It is your main text for the course. Bring it to all classes except field trips.
- b. Your *Astronomy Survival Notebook* should be brought to every class. Your notebook must be:
 - 1) <u>Complete</u>: It should include class lecture notes and PowerPoint/blackboard illustrations, handout sheets, work sheets, etc.
 - 2) <u>Organized</u>: Keep information from one topic separate from other topics.
 - 3) <u>Neat</u>: Information must be neat and legible.
 - 4) <u>Up-to-date</u>: Your notebook may be checked at any time.
- c. The replacement value of a lost *Astronomy Survival Notebook* is \$20.00.
- 10. **Extra Credit:** No extra credit will be allowed this semester. When it is permitted it will be sanctioned only if a student's grade is a "C" or better. Permission from your instructor is mandatory. Please see the specific page devoted to this topic found in the introductory material of this section.
- 11. <u>Semester Grades:</u> Scaled examination scores, quizzes, class participation, free points, notebook accuracy, and laboratory exercises will determine semester grades. Participation could add as many as five percentage points to a semester grade.
- 12. <u>Student Access to Grades:</u> Students will always have access to their current grades while remaining anonymous to their peer taking the course.

About Your Instructor:

Name:	Gary A. Becker
Office phone:	Mobil: 610-390-1893 / Moravian Office: 610-891-1476
E-mail:	garyabecker@gmail.com or garyabecker@moravian.edu
Home Page:	www.astronomy.org
Education:	William Allen High School (1968), BS, Kutztown University (1972)
	MA, West Chester University (1984)
Hobbies:	Astronomy, photography/astrophotography, writing, traveling
Memberships:	American Astronomical Society, Lehigh Valley Amateur Astronomical Society,
Inc., Pennsylv	ania Earth Sciences Association

Personal Philosophy of Education: The educational process should be enjoyable. Ideally, pupils should want to attend classes because of their own innate curiosities. Teachers should try to create a classroom in which the student feels emotionally at ease while at the same time he or she is being academically challenged.

Student Responsibilities: Students should make an honest attempt to grasp the lessons and homework assignments. In class he or she should play an aggressive role in trying to gain familiarity with the subject material. Most importantly, a student should be honest with himself, his peers, and his teachers. In other words, no B.S., please!

Bring to each class your *Astronomy Survival Notebook*, a pencil, a calculator, and a flashlight. Smart phones may qualify for the latter two applications, except when an exam is given.

FORMULA FOR SUCCESS in Astronomy EASC-130, Moravian College Astronomy:

- 1. **Complete the exercises in your** *Astronomy Survival Notebook.* Skim through the chapters before they are discussed in class, so that you will know what is considered important. Than read them again. Answer the questions in the back of each chapter.
- 2. Use your *Astronomy Survival Notebook*, *Universe* text, reading material, Reeves Library, Internet, and instructor as resource avenues. I am ready and willing to assist you in any reasonable way to help your achievement in this course. Astronomy has been my life's vocation, as well as my hobby, and I want you to be successful.
- 3. Possess some mathematical skills (at least through algebra).
- 4. **Study** for exams over a period of several days.
- 5. **Review the lecture slides** at <u>www.astronomy.org/moravian/index.html</u>. Remember that a picture is worth a thousand words.
- 6. **Participate** in classroom activities, take notes, and ask questions when in doubt.
- 7. Complete assignments on time and laboratory exercises in a neat and orderly fashion.
- 8. Attend class regularly. You miss class; you miss out, and your grade will suffer!
- 9. **Inform your instructor if you will be absent from class:** <u>garyabecker@gmail.com</u> or <u>beckerg@moravian.edu</u> or 610-390-1893. I will not tell you what you have missed unless you contact me first.
- 10. **Practice The Golden Rule:** *Do unto others as you would have others do unto you.* Treat your instructor with respect and I will have no trouble returning the same favor.

- 11. The Moravian College *Official Code of Conduct* applies to all students, but especially to those who feel that cooperation, responsibility, respect, and tolerance <u>ARE NOT</u> important to the educational process. Kindly remember that <u>EDUCATION IS NOT A</u> <u>DEMOCRACY</u>, but it does not have to be a dictatorship either.
- 12. <u>NEED HELP</u>? Please feel free to stay after class if you need extra help or to make an appointment to see me at our mutual convenience. I will not harass you like your parents, but I may make suggestions. You are old enough and should be mature enough to understand the consequences of not following these suggestions, as well as the consequences of failure.
